

Drainage.

INTRODUCTION

Saudi Cast was established in Riyadh in 1972, as an iron and steel foundry, specializing in the production of manhole covers, roof drains, floor drains, and mechanical castings. The aim back then, as it is today, was to provide our customers with a quality product, at the most economic value. This simple formula has helped us to lead the market in the drainage industry in our home country of Saudi Arabia, and has made us a serious contender in the drainage industry in the region.

We pride ourselves in seeking the latest technology in design, production, and quality assurance. In addition, our people are continuously trained, appraised, and appreciated, making them the single most important element of our modest success.

Saudi Cast is an ISO 9001:2015 certified company, and our products are approved by Saudi Arabian Standard Organization (SASO), BSI Kitemark, and General Society of Surveillance (SGS).

ROOF DRAINS, FLOOR DRAINS, & CLEANOUTS

Saudi Cast has a wide range of roof drains, floor drains, area drains, and cleanouts made in a variety of metals and grades, such as grey cast iron, ductile iron, stainless steel, aluminum, and nickel bronze.

Saudi Cast products are designed considering the harsh climate and weather conditions of the region. Powder coating is applied to protect against the severe climate conditions in accordance with local and international standards and specifications.

STAINLESS STEEL RANGE

Our specification-grade stainless steel drains provide high volume drainage capacity for ablution areas, washrooms, and kitchens. We provide design recommendations, as well as product customization. Our stainless steel range is the perfect solution for clean and effective drainage in public, as well as in private washrooms.

TRENCH DRAINS & GRATES

Saudi Cast's trench and channel drains consist of two parts: a grating made of either stainless steel, cast iron, ductile iron, or galvanized mild steel, mounted on a polymer concrete channel, or stainless steel channel.

The channels are easy to install, and can be provided with a built-in slope. The gratings are suitable for any open area drainage, and provide flexibility, durability, and ease of maintenance.

Our trench and channel gratings are ideal for use around swimming pools, and in car parks, gardens, walkways, and other public areas.

GREASE & OIL INTERCEPTORS

Fabricated out of stainless steel, or epoxy-coated mild steel, our grease interceptors offer a high level of protection to your plumbing network. They come in two cleaning systems: hydro mechanical, or fully automatic. We also offer interceptor mechanisms against lint and sand.

LITE DRAINS

The "Lite Drains" range of floor drains and clean-outs are made of a plastic body, with a combination of either nickel bronze, or stainless steel tops. The roof drains are manufactured with a plastic body and dome with an iron clamp. They are light in weight and have a high chemical resistant, which make them useful for use in high-rise buildings, mechanical rooms, and laboratories.

DRAIN ACCESSORIES

Check out our extensive range of accessories which will complement our products, giving you a complete solution to your drainage needs. You can choose from a wide range of gaskets, couplings, seals, and much more.

TREE GRATES

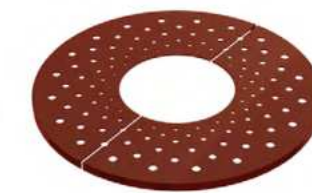

We have totally revolutionized the designs and the materials of the conventional tree grates. We offer tree grates that blend perfectly with the landscape providing looks as well as the durability. Our new tree grates are lighter in weight making them easy to transport, store, and install. They are easy to maintain and, thanks to our advanced coating technology, can withstand severe weather conditions. They offer protection as well as functionality in public parks, shopping malls, stadiums, or indeed in your back garden!

MANHOLE COVERS & GRATINGS

Our range of manhole covers and gratings have been on the market since 1972, and have become the market leader in design, functionality and quality.

Cast in either gray or ductile iron, our covers are durable, rigid, and easy to install. And with features such as double sealing, vent holes, and machined-seating, they offer safety, as well as durability.

Our range includes covers for every infrastructure and service project such as: water distribution networks, phone and fiber optic networks, electricity grids, sewage disposal projects, and many more. They are made in a variety of shapes, sizes, and bearing loads.

Our covers have become synonymous with quality and integrity, as they truly represent our strong heritage and rich experience since our inception in 1972.
